HYDROPLUS AZ35**/XX PIGMENTED CONVERTER FOR EXTERIORS NEW: KOMO TYPE III CERTIFICATION

Product dedicated to the coating of window and door frames and wooden products exposed outdoors.

Easy to use, it gives good verticality and durability. The application versatility allows excellent results with automatic and manual systems, both flat and vertical. Excellent water resistance and wet adhesion. Absence of "blocking" and removal phenomena even when overcoating in a very short time.

AZ35/XX** are single-component water-based finishes with elasticity and durability that make them ideal in the field of protecting wood outdoors. They complement the existing series, favoring the characteristics required in specific industrial uses such as flow and water resistance, without the need to introduce a cross-linker.

AZ35/XX** are created as bases for the tinting system, therefore they must be pigmented with **XA2006/XX** pastes up to 5% by volume for the white version /BB and 6% by volume for the neutral /NN, according to the Sayerlack formulary.

The **KOMO TYPE III** certification guarantees excellent performance even in drying conditions up to 16°C and 65% R.H., allowing the coating application and the joinery installation also in critical conditions.

TECHNICAL FEATURES

AREA OF USE	Window and door frames.
APPLICATION	Cup, airmix, airless or electrostatic spray.
