NEW CLEAR HYDROPLUS STAINS FOR ROOF BEAMS AND EXTERIOR STRUCTURES AM0634/00 AND AM0612/00

For beams and ceilings claddings, it guarantees brilliant colors and a harmonizing effect.

The particular formulation of **AM0634/00** allows the formation of grey patches to be minimized in coarsely processed fir and pine wood for use in construction. The product can be used ready for use, diluted with water if necessary.

Extremely versatile in application, it's easy to use and suitable for different equipment without any adjustment. If applied on items exposed directly to the elements, an additional layer of high solid product such as **AM0612/00** is recommended.

AM0612/00 is a water-based impregnating stain suitable for protecting wood outdoors. The high solid residue and the specific wax contained in the product give the artefacts better water-repellency and protection from atmospheric agents, compared to only classic basecoat stain. Designed for the treatment of all semi-stable products such as roof beams, fences, ceilings claddings, gazebos, beads and garden furniture.

It's possible to tone both products in all the desired colors with the transparent iron oxide pastes of the **XA4034/XX** series up to 5%, or even color it with pigmented pastes such as **XA2006/XX** up to 4% for a more covering and harmonizing effect.

TECHNICAL FEATURES	
AREA OF USE	Beams and ceiling claddings.
APPLICATION	Flow coating, brush, manual roller, spray, sponge, impregnating machines, dipping.
